

## **CLIMATE**

The climate OF Durmitor area is mountainous (continental and sub-mountainous), characterized by long and cold winters with plenty of snow and short fresh summers. The average annual temperature in Zabljak is 8C, (January 3C, and July 14C). The average annual rainfall is 1800mm (1400-2200), with the highest rainfall occurring in November and at least in August.

The most frequent winds south in 22% and north in 25% .

The vegetation period in Zabljak lasts about 120 days, from May to September. Higher rainfall and shortened duration of the vegetation period impose grassland management, which is characterized by a lower level of production intensity, a very pronounced seasonality of works and limited possibilities for choosing production lines. The mountain climate is suitable for the development of livestock and intensive forage.
